Purpose and procedure	129	Diagnosis	
EBM notebook		BNP and amino terminal proBNP assays did not differ for detecting congestive heart failure in the emergency department	148
Jottings . . .	130	A decrease of ≥ 2 points on the Mini-Mental State Examination was the best determinant of delirium in elderly patients admitted to hospital	149
Letter: Meta-analysis can be statistically misleading	130	Prognosis	
In response: . . . but they also present an opportunity to learn more.	130	Review: B type natriuretic peptide consistently predicts death and cardiovascular events in heart failure	150
Clinical skills textbooks fail evidence-based examination	131	Gleason score predicted mortality rate to 20 years for untreated early prostate cancer	151
Statistical approaches to uncertainty: p values and confidence intervals unpacked	133	Overall mortality was 2.2% in children after a first unprovoked afebrile seizure	152
Evidently . . .	135	Aetiology	
Therapeutics		Subclinical hypothyroidism increased the risk of placental abruption and poor neonatal outcomes	153
Warfarin was not more effective than aspirin and increased adverse events in symptomatic intracranial arterial stenosis	136	Quality improvement	
Low dose aspirin lowered stroke risk but not risks of MI or cardiovascular deaths in women	137	Pharmacist led, primary care based disease management reduced risk factors and improved glycaemic control in diabetes	154
Intensified blood pressure (BP) control was not better than conventional BP control in non-diabetic chronic renal disease	138	Clinical prediction guide	
ED use of magnesium sulphate improved rate control in atrial fibrillation with rapid ventricular response	139	A clinical prediction model predicted absence of significant fibrosis in chronic hepatitis B	155
Review: several pharmacological therapies promote modest weight loss	140	Additional articles abstracted in ACP Journal Club	156
Review: sparse high quality evidence supports surgery for obesity	141	Other articles noted	157
Screening for abdominal aortic aneurysm (AAA) reduced AAA mortality in Danish men 64–73 years of age	142	Resource reviews	159
A smoking cessation programme plus inhaled ipratropium improved survival in asymptomatic airway obstruction	143	Glossary	Inside back cover
Clinician advice, an interactive computer program, and motivational counselling increased smoking cessation in teens	144		
Cognitive therapy reduced relapses and number of days in bipolar episodes in <i>DSM-IV</i> bipolar I disorder	145		
Review: bright light therapy and dawn simulation reduce symptom severity in seasonal affective disorder	146		
Buccal oxycodone reduced pain more than placebo in children with acute undifferentiated abdominal pain	147
