

Evidence-Based Medicine

Contents

Editorial

- 81** 'We do not see the lens through which we look': screening mammography evidence and non-financial conflicts of interest

Original EBM Research

- 83** Citations of scientific results and conflicts of interest: the case of mammography screening

Perspective

- 90** Medical apps for smartphones: lack of evidence undermines quality and safety

Primer

- 93** Searching for the right evidence: how to answer your clinical questions using the 6S hierarchy

Systematic review

- 98** What effect does breastfeeding have on coeliac disease? A systematic review update

Therapeutics

- 104** Oral egg immunotherapy is effective for desensitisation but not for inducing sustained tolerance in the majority of egg allergic children
- 105** Intensive glucose control in patients with type 2 diabetes is associated with a reduction in albuminuria and may be associated with reduced end-stage renal disease

Prevention

- 107** Cervical pessary reduces spontaneous delivery before 34 weeks and adverse outcomes in pregnant women with a short cervix
- 108** Lung cancer screening with low-dose CT: benefits and potential risks
- 109** Hormone therapy not recommended for chronic disease prevention in menopausal women
- 110** Cranberry-containing products are associated with a protective effect against urinary tract infections

Prognosis

- 112** Appointment and medication non-adherence is associated with increased mortality in insulin-treated type 2 diabetes

June 2013 Volume 18 No 3

- 113** Opposite impacts of dietary versus supplemental calcium on cardiovascular health
- 114** Exclusive bottle feeding of either formula or breast milk is associated with greater infant weight gain than exclusive breastfeeding, but findings may not reflect a causal effect of bottle feeding

Aetiology

- 116** Long-term coffee consumption associated with reduced risk of total and cause-specific mortality
- 117** Elective induction of labour is associated with decreased perinatal mortality and lower odds of caesarean section at 40 and 41 weeks

PostScript

- 120** Milk, chocolate and Nobel prizes: potential role of lactose intolerance and chromosome 2
- 120** Correction

Online articles

- e21** Elective delivery of twins at 37 weeks gestation decreases infant complications
- e22** Zinc supplementation for probable serious bacterial infection in early infancy may reduce the need for antibiotic change
- e23** Early planned birth may reduce neonatal sepsis compared to expectant management following preterm premature rupture of the membranes close to term
- e24** A brief intervention by emergency department providers decreased 12 month alcohol use
- e25** High-intensity interventions promote smoking cessation among hospitalized patients
- e26** Confirming the value of pulse oximetry screening for diagnosing critical congenital heart disease
- e27** Primary care-based screening, diagnosis and management of postpartum depression effective for improving symptoms
- e28** The cardiovascular risk of azithromycin was increased in a large observational cohort study, contradicting findings from prior randomised trials
- e29** Initiation of long-acting reversible contraceptive methods (IUDs and implant) at pregnancy termination reduces repeat abortion
- e30** Lack of association between proton pump inhibitors and adverse events in patients taking clopidogrel and aspirin
